

**AMENDMENTS TO THE CLAIMS**

1. (Currently Amended) A method for displaying a digital broadcasting, the method comprising:

displaying an audio video (AV) broadcast signal and a first data broadcast signal based on an Open Cable based broadcasting standard~~a first broadcasting standard~~;

tuning to a second data broadcast signal based on an ATSC (Advanced Television Systems Committee) based broadcasting standard~~a second broadcasting standard~~ different than the ~~first broadcasting standard~~Open Cable based broadcasting standard in response to a request for a modification of the first data broadcast signal being displayed; and

displaying the tuned second data broadcast signal based on the ~~second broadcasting standard~~ATSC based broadcasting standard,

wherein when the A/V broadcast signal is a first A/V broadcast signal including the first data broadcast signal, the first A/V broadcast signal is received and tuned through a first tuner,

wherein when the A/V broadcast signal is a second A/V broadcast signal including the second data broadcast signal, the second A/V broadcast signal is received and tuned through a second tuner,

wherein when the first A/V broadcast signal is received and tuned through the first tuner, a first transport packet processor connected to an output of the first tuner extracts the first data broadcast signal from the first A/V broadcast signal, and when the second A/V broadcast signal is received and tuned through the second tuner, a second transport packet processor connected to an output of the second tuner extracts the second data broadcast signal from the second A/V broadcast signal, and

wherein a data processor connected to the first and second transport packet processors processes the corresponding first and second data broadcast signals, and an A/V processor connected to the first and second transport packet processors processes the corresponding first and second A/V broadcast signals such that any one of the first and second data broadcast signals can be displayed together with any one of the first and second A/V broadcast signals.

2-3. (Canceled).

4. (Currently Amended) The method according to claim 1, wherein the first AV broadcast signal based on the ~~first broadcasting standard~~Open Cable based broadcasting standard and the second data broadcast signal based on the ATSC based broadcasting standard ~~second broadcasting standard~~ are simultaneously displayed on one screen in a picture in picture (PIP).

5. (Currently Amended) A digital broadcasting display method comprising:  
receiving and tuning at least one of a first and second audio/video (A/V) broadcast signals through a corresponding first and second tuners, said first and second A/V broadcast signals being based on corresponding Open Cable based broadcasting and ATSC (Advanced Television Systems Committee) based broadcasting standards ~~first and second broadcasting standards~~ that are different from each other;

extracting first and second data broadcast signals from the first and second A/V broadcast signals via first and second transport packet processors connected to the first and second tuners, respectively;

processing the first and second A/V broadcast signals with an A/V processor connected to the first and second transport packet processors;

processing the first and second data broadcast signals with a data processor connected to the first and second transport packet processors; and

displaying any one of the first and second A/V broadcast signals with any one of the first and second data broadcast signals

6-7. (Canceled).

8. (Currently Amended) The method according to claim 5, wherein the first AV broadcast signal based on the ~~first broadcasting standard~~Open Cable based broadcasting standard and the second data broadcast signal based on the ~~ATSC based broadcasting standard~~second broadcasting standard are simultaneously displayed on one screen in a picture in picture (PIP).

9. (Currently Amended) A digital broadcasting display method comprising:  
tuning first and second audio/visual (A/V) broadcast signals based on different ~~first and second broadcasting standards~~Open Cable based broadcasting and ATSC (Advanced Television Systems Committee) based broadcasting standards, the first and second A/V broadcast signals being received and tuned through first and second tuners, respectively;

extracting first and second data broadcast signals from the first and second A/V broadcast signals via first and second transport packet processors connected to the first and second tuners, respectively; and

displaying, via a display unit connected to the first and second transport packet processors, any one of the first and second A/V broadcast signals with any one of the first and second data broadcast signals.

10-12. (Canceled).

13. (Previously presented) The method according to claim 9, further comprising tuning the second broadcast signal received through the second tuner in response to a request for a modification of the first and second A/V broadcast signals being displayed.

14. (Previously presented) The method according to claim 9, wherein the first A/V broadcast signal tuned by said first tuner and the second data broadcast signal received through said second tuner are simultaneously displayed on one screen in a manner of picture in picture (PIP).

15. (Currently Amended) An apparatus for displaying a digital broadcast signal, the apparatus comprising:

at least first and second tuners configured to selectively tune first and second audio/video (A/V) broadcast signals received according to different Open Cable based broadcasting and

ATSC (Advanced Television Systems Committee) based broadcasting standards~~first and second broadcasting standards~~, respectively;

first and second transport packet processors respectively connected to the first and second tuners and configured to extract first and second data broadcast signals from the first and second A/V broadcast signals;

an A/V processor connected to the first and second transport packet processors and configured to process the first and second A/V broadcast signals;

a data processor connected to the first and second transport packet processors and configured to process the first and second data broadcast signals; and

a controller connected to the first and second transport packet processors and configured to display on a display any one of the first and second data broadcast signals with any one of the first and second A/V broadcast signals in response to a request from a user.

16-19. (Canceled).
